| Chaitanya Bharathi Institute of Technology<br>Bachelor of Engineering: Mechanical Engineering | Hyderabad, Telangana, India<br>September 2023 - May 2027 |

| SKILLS SUMMARY |                                                              |
|----------------|--------------------------------------------------------------|
| • Languages:   | Python, C, C++, JAVA, Machine learning                       |
| • Frameworks:  | Pandas, NumPy, Scikit-Learn, Matplotlib                      |
| • Tools:       | Power BI, Excel, PowerPoint, MS Word, MySQL, SQLite          |
| • Platforms:   | PyCharm, Jupyter Notebook, Visual Studio Code, IDE           |
| • Soft Skills: | Rapport Building, People Management, Excellent communication |

| WORK EXPERIENCE                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                           |

- Networking: Strong grasp of TCP/IP, DNS, routing, and firewall management.
- OS: Proficient in Linux (Kali) and Windows administration.
- Programming: Skilled in Python, JavaScript, SQL, and Bash for automation.
- VAPT: Experienced in using Nmap, Metasploit, and Burp Suite for threat simulation.
- Security: Capable of identifying vulnerabilities like SQL injection, XSS, and cloud misconfigurations.

#### **Introduction to programming with MATLAB (CBIT) |**

**December 2025**

- Enhanced the MATLAB-based CFD interface by integrating Handle Graphics for precise manipulation of visual objects,
- Implemented sparse matrix support to optimise large-scale structural simulations.
- And designing interactive GUI tools featuring sliders and buttons for enhanced user engagement.

#### **Applications of CFD in Mechanical Engineering (CBIT) |**

**December 2025**

- Optimised aerodynamic profiles for drag reduction and thermal management.
- Improved turbomachinery blade design to increase power yield in turbines.
- Modelled indoor air quality and airflow layouts to mitigate data centre hotspots.
- Simulated material processing to reduce casting defects and enhance electronics cooling.
- Integrated Handle Graphics into a MATLAB-based CFD interface for precise visual manipulation.

#### **E-Learning (Nestle) |**

**September 2026**

- The program offers 24/7, multilingual, self-paced learning covering compliance, digital transformation, leadership, and safety.
- It provides personalised, data-driven learning paths and combines micro-learning, simulations, and structured certifications
